Background	<p>TSC22 domain family member 3(TSC22D3) Homo sapiens This gene encodes the anti-inflammatory protein glucocorticoid (GC)-induced leucine zipper. Expression of this gene stimulated by glucocorticoids and interleukin 10 and it appears to play a key role in the anti-inflammatory and immunosuppressive effects of this steroid. This protein has also been shown to inhibit pro-inflammatory molecules including nuclear factor &amp;#954;B. Alternate splicing results in multiple transcript variants.
