Background	<p>solute carrier family 6 member 20(SLC6A20) Homo sapiens Transport of small hydrophilic substances across cell membranes is mediated by substrate-specific transporter proteins which have been classified into several families of related genes. The protein encoded by this gene is a member of the subgroup of transporter with unidentified substrates within the Na<sup>+</sup> and Cl<sup>-</sup> coupled transporter family. This gene is expressed in kidney, and its alternative splicing generates 2 transcript variants. [provided by RefSeq, Jul 2008].</p>
