

Olfactory receptor 8G1 Polyclonal Antibody

Cat No: HR1AP6608

For research use only

Overview

Product Name	Olfactory receptor 8G1 Polyclonal Antibody
Source	Rabbit
Applications	WB,IF,ELISA
Species Reactivity	Human
Recommended Dilutions	
Immunogen	
Species	Rabbit
Storage	-20°C/1 year
Isotype	
Clonality	
Concentration	1 mg/ml
Observed band	35kDa
GeneID?Human?	OR8G1
Human Swiss-Prot No.	
Cellular localization	
Alternative Names	OR8G1; OR8G1P; Olfactory receptor 8G1; Olfactory receptor OR11-281; Olfactory receptor TPCR25
Background	<p>olfactory receptor family 8 subfamily G member 1 (gene/pseudogene)(OR8G1) Homo sapiens Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. This family member represents a polymorphic pseudogene, whereby some individuals have a functional allele that encodes a full-length protein, while others have a non-functional allele due to t</p>
